SUMMARY

I am an aspiring Data Scientist with a strong technical background in Heating, Ventilation, Air Conditioning, and Refrigeration (HVAC/R) through my service in the United States Air Force. My experience solving complex technical problems has strengthened my analytical thinking, attention to detail, and commitment to continuous improvement.

I am currently completing a Master of Science in Data Science, where I have developed skills in Python programming, machine learning, statistical analysis, data visualization, and artificial intelligence. I enjoy transforming raw data into meaningful insights that help organizations make informed decisions.

I am passionate about lifelong learning and look forward to applying data science to solve real-world business challenges.

EDUCATION

Bellevue University

Master of Science in Data Science

United States Air Force

Heating, Ventilation, Air Conditioning, and Refrigeration (HVAC/R)

PROJECTS

COVID-19 Twitter Sentiment Analysis | This project analyzed over 170,000 COVID-19-related tweets to understand public sentiment during the pandemic. After cleaning and preprocessing the data, sentiment analysis was performed using TextBlob to classify tweets as positive, neutral, or negative.

- Tools Used: Python, Pandas, NumPy, Scikit-learn, TextBlob, Matplotlib, WordCloud, Jupyter Notebook
- Machine learning models including Logistic Regression and Random Forest were trained using TF-IDF features to classify tweet sentiment.
- Visualizations illustrated sentiment trends, common words, and hashtag usage to provide actionable insights.
- Skills Demonstrated: Data Cleaning, Exploratory Data Analysis (EDA), Natural Language Processing, Feature Engineering, Machine Learning, Data Visualization, Model Evaluation

Data Mining & Business Analytics | Completed multiple projects involving classification, regression, clustering, model evaluation, feature engineering, and data storytelling.

- These projects emphasized translating analytical results into business recommendations that stakeholders can understand and use for decision-making.

Portfolio Development | This portfolio demonstrates my growth as a data scientist and highlights projects completed throughout my graduate program.

- My goal is to continually expand this collection with projects involving machine learning, artificial intelligence, predictive analytics, and business intelligence.

TECHNICAL SKILLS

Machine Learning

Natural Language Processing (NLP)

Artificial Intelligence

Data Visualization

Predictive Analytics

Business Intelligence
Python
SQL
Pandas
NumPy
Scikit-learn
TextBlob
Matplotlib
Logistic Regression
Random Forest
Classification
Sentiment Analysis
TF-IDF
Feature Engineering
Git
GitHub
Jupyter Notebook
Visual Studio Code

CAREER OBJECTIVE

My goal is to begin a career as a Data Scientist where I can combine technical expertise, analytical problem-solving, and machine learning techniques to solve meaningful business problems. I am particularly interested in roles involving artificial intelligence, predictive analytics, and data-driven decision making.
